github.com/DeveloperAlly

blog.alisonhaire.com

Founder and product leader with 8+ years building AI infrastructure - from AIOps at Accenture to a distributed AI compute network running verifiable inference across thousands of GPU nodes globally. Led go-to-market and developer experience for major Web3 platform launches, including Filecoin Virtual Machine. Published researcher in GPU verification and trustless compute. 30+ conference talks translating deep technical architecture for developer and institutional audiences into strategic value propositions for users and business.

AT A GLANCE

Product Strategy & GTM Leadership	AI Infrastructure Engineering	Developer Relations & Ecosystem Growth	Technical Writing & Public Speaking
Owned platform launches, developer experience, and GTM strategy end-to-end	Built distributed GPU inference network; verifiable, off-chain compute for AI agents	Space Warp hackathon; grants programme; led FVM developer ecosystem launch	ETH Devconnect, SmartCon, ETH_AI Day; Blockworks op-ed; arXiv published

EXPERIENCE

AI Product Advisor & Independent Consultant · Self-employed

Nov 2025 – Present

Independent AI strategy and product advisory for startups and enterprises building with AI infrastructure.

Founder & CEO · Lilypad Network

Sep 2023 – Oct 2025

Founded and shipped the privacy-preserving compute layer for AI agents - a three-sided GPU marketplace enabling verifiable, trustless AI inference at scale.

- Built a distributed AI compute network from a single Filecoin smart contract proof-of-concept to a globally deployed, open-source infrastructure - GPU providers, AI module creators, and developers running inference pipelines across thousands of active nodes.
- Product.** Designed and shipped the full AI infrastructure stack:
 - Serverless inference pipelines, verifiable off-chain compute, job-based orchestration, containerised model deployment, and a Module Marketplace for on-demand AI workloads
 - Ran Stable Diffusion, Ollama LLMs, SDXL, Mistral, protein folding models, and multi-step agentic pipelines in production
- Launched IncentiveNet testnet (Jun 2024) - live network with thousands of active GPU nodes; solo keynote livestream; PR Newswire announcement.
- Research.** Published arXiv:2501.05374 - "Validation of GPU Computation in Decentralized, Trustless Networks" - proposing novel probabilistic verification frameworks for non-deterministic GPU workloads on untrusted networks.
- Structured an enterprise partnership with Dell to develop a permissioned, licensable version of Lilypad for enterprise AI adoption.

- Delivered 15+ conference talks on distributed compute and AI infrastructure - ETH Devconnect Istanbul (keynote), SmartCon, ETH_AI Day, Developer DAO, DeSci London - translating deeply technical architecture into audience-appropriate narratives.
- Wrote a Blockworks op-ed - "A small group of tech giants are holding AI's future hostage" - making the case for decentralised compute as an AI governance imperative.
- Shipped APIs, SDKs, CLI tools (5,000+ downloads), and developer documentation - full developer-facing product surface owned end-to-end.
- Open-sourced the full Lilypad codebase (late 2025); accepted into Olas Agent Accelerator (Jun 2025).

Product & Project Manager, Developer Experience · Protocol Labs · Filecoin Foundation

Jan 2022 – Nov 2023

Led the developer experience and go-to-market for the Filecoin Virtual Machine - one of the largest smart contract platform launches in Web3.

- Owned the FVM developer experience roadmap for six months pre-launch; assembled the DX team; set direction in collaboration with technical and product leadership.
- **DevRel.** Ran the Space Warp Hackathon - 1,000+ hackers, 276 submissions - the flagship FVM developer activation event.
- Led developer education, grants programme, and ecosystem partnerships across the Protocol Labs network.
- Transitioned to the Bacalhau team post-FVM to integrate FVM with decentralised compute - the direct technical origin of Lilypad.
- Delivered 20+ talks at major Web3 conferences (ETHGlobal, IPFS Camp, ETH_AI Day, Consensus) representing Filecoin Foundation.
- UN World Innovation Day Hackathon 2022 - Lead Judge representing Filecoin Foundation.
- [Waterlily.ai](#) (Early 2023) – Side project built on FVM: first AI-generated art platform paying on-chain royalties to artists; covered by SiliconANGLE, featured by Filecoin Foundation.

TPM & Senior Software Engineer · University of Sydney × Australian Air Force

Nov 2019 – Mar 2022

- Greenfield ML/IoT classified research project - designed and built a distributed ML and IoT automation system for real-time AI analytics on mass incoming sensor data.
- Applied AI and ML to intelligence processing at scale; worked on cutting-edge distributed devices in a joint physics and defence context.

Lead Developer Relations Engineer, ANZ · IBM

Apr 2020 – Jan 2022

- Led developer advocacy across ANZ for IBM Cloud, Kubernetes, Watson AI, and blockchain - enabling enterprise partners across the APAC IBM Partner Ecosystem.
- Client Success & Consulting across IBM product suite
- Built and ran IBM Developer Meetups ANZ; co-organised IBM Call For Code Hackathons ANZ 2020 and 2021; co-hosted Tech Jam Podcast.
- Delivered 10+ talks at developer conferences including APIdays Jakarta, Digital Developer Conference, BrisJS.

Technical Architect & Software Engineer · Accenture

Feb 2018 – Nov 2019

- Full stack development on Accenture's AIOps flagship product - primary front-end engineer; delivered customised automated business solutions to global enterprise clients.
 - Stack: React.js, Node.js, Express, MongoDB, Splunk, Docker, Jenkins CI/CD, AWS.
-

RESEARCH & WRITING

- **Published.** arXiv:2501.05374 - "Validation of GPU Computation in Decentralized, Trustless Networks" (Boniardi, Bishop, Haire) - Jan 2025. Proposes binary and ternary consensus frameworks for verifying non-deterministic GPU workloads on trustless networks - directly relevant to confidential compute and privacy-preserving AI infrastructure.
- Blockworks op-ed - "A small group of tech giants are holding AI's future hostage" - Sep 2024.
- HackerNoon Top Story - AI Art NFT DApp technical tutorial.
- 34 posts on Hashnode; active contributor on Dev.to (Trusted Member 2022, Tag Moderator 2022); Medium and Lilypad blog.

SELECTED CONFERENCE TALKS (30+ INDEXED AT [SESSIONIZE.COM/ALISON-HAIRE](https://sessionize.com/alison-haire))

ETH Devconnect Istanbul	Baklava Calibration Testnet keynote - live network launch on stage	Nov 2023
ETH_AI Day	Distributed AI compute and verifiable inference	2023 / 2024
SmartCon (Chainlink)	Lilypad architecture and deAI infrastructure	2024
DeSci London	Decentralised science and AI compute	2024
Developer DAO DevNTell	Serverless distributed compute for AI (x2 episodes)	2024
IPFS Camp	Decentralised compute and FVM integration	2023
ETHGlobal Workshop	AI Art NFTs on FEVM with Bacalhau Stable Diffusion	2023
APIdays Jakarta	Cloud Native and OpenShift	2021
IBM Digital Developer Conf.	Hybrid Cloud and Cloud Security panels	2021

TECHNICAL SKILLS

AI & Compute Distributed inference · Verifiable compute · LLM orchestration · Agent pipeline design · RAG / CAG · Prompt engineering · Stable Diffusion / SDXL · Ollama · OpenAI · Claude (Anthropic) · Job scheduling · MCP

Blockchain & Privacy EVM / Solidity · Smart contracts · Filecoin / IPFS · Bacalhau · Multi-chain coordination · Verifiable off-chain compute · FVM · Web3 infra

Engineering Python · TypeScript · JavaScript · React.js · Node.js · Docker · AWS · Kubernetes · MongoDB · CI/CD · REST APIs · GraphQL

Automation & Tooling n8n · Sliplane · GitHub · Notion · HubSpot API · Salesforce API · Vercel

EDUCATION

Bachelor Engineering (Mechatronics) / Bachelor Computer Science (Honours)

University of Wollongong 2012–2017

New Colombo Plan Scholarship - Robotics, China (competitive Australian Government scholarship)

BA - Philosophy, Politics, French · Australian National University

1999–2001

RECOGNITION

Olas Agent Accelerator (2025) · arXiv Published Researcher (2025) · HackerNoon Top Story · Telstra Innovation Hackathon - 1st Runners Up Overall & Smart Logistics Winner (2021) · iAccelerate Startup Founder (2017) · New Colombo Plan Scholar · Accenture "Coffee Beans to Coding" Feature
